

Excel file ready

I prepared an Excel literature-review file containing 20 recent and authentic papers on computer-vision-based cattle body-weight estimation. It includes the requested fields:

- Sr. no.
- Title
- Year
- Journal/conference
- Problem
- Method
- Dataset used
- Results
- Challenges
- Future directions
- Links

The review includes dairy-cow, dairy-calf, and closely related cattle studies because several important methods—such as RGB-D imaging, 3D point clouds, UAV imaging, semantic segmentation, CatBoost, PointNet++, YOLOv8, and transfer learning—are directly applicable to dairy cattle weight estimation. The literature shows a progression from handcrafted morphological features and regression models toward deep learning and multimodal 3D systems. ^{[1] [2] [3]}

The Excel file is attached and ready for download:

computer_vision_dairy_cattle_weight_literature_review.xlsx

Note: The 2026 transfer-learning paper is clearly marked as an **arXiv preprint**, not yet a peer-reviewed journal/conference publication. The 2025 dairy-calf study reports YOLOv8 segmentation IoU of 0.98, XGBoost $R^2 = 0.91$, and longitudinal LMM $R^2 = 0.99$. ^{[3] [4]}
